

IMPROVED KNOWLEDGE

Ovarian cell types and hormone profiles change from fetal to adult age

EDCs can harm the function of ovaries at all ages

EDCs can be found inside ovaries and are linked to reduced fertility

SUPPORT FOR EDC IDENTIFICATION

Computer models to predict molecular targets

Cell-based assays to study effects on the ovary, eggs and early embryo development

Sensitive endpoints and methods to better capture female reproductive effects in existing animal models

Biomarkers, maps and adverse outcome pathways to help explain the effects of EDCs

RECOMMENDATIONS TO PROTECT HEALTH

ENHANCE AWARENESS on measures to prevent EDC exposure

INCREASE TRAINING for health professionals

EXPAND KNOWLEDGE on effective ways to prevent exposure

IMPLEMENT LEGISLATION to reduce use of and exposure to EDCs
